## EMPLOYMENT HISTORY

Ui/Ux Developer, Plow Digital

2013 — Current

*Indianapolis, IN*

- Implement web interaction design best practices, with a focus on consistency and usability.
- Develop fully functional responsive web and app layouts based on business requirements using HTML/HTML5, CSS3, and jQuery.
- Work with content management systems, including but not limited to WordPress and Umbraco.
- Work with designer and creative leads to create wireframes.
- Collaborate with the design team to define the information architecture.
- Create interactive prototypes to facilitate user testing.
- Help integrate the user centered design process and principles into our project workflow.
- Work closely with creative director to ensure user experience goals are outlined, technically feasible and are being met throughout the project life cycle.
- Work closely with back-end developers to optimize existing web technology and create the best possible user experience.
- Collaborate with other team members and stakeholders.
- Test front-end code in multiple browsers and devices to ensure cross-browser compatibility.
- Maintain client's brand standards under company guidelines.
- Create HTML email templates and newsletters for e-mail marketing campaigns.

- Implement SEO and ADA best practices.
- Prioritize and manage multiple tasks across multiple projects, under tight deadlines.
- Roll out and scale new web sites that integrate consumer marketing and social media.
- Work with backend engineers and QA to see projects through, from conception to completion.
- Update existing websites and provide maintenance support for clients using Zendesk for communication.
- Work with Git source control.
